SUMMARY

My interest in software development can be traced back to when I was 12 years old. It was then that I learned about game modification through add-ons. That discovery opened my eyes to the immense potential for creativity and self-education in software development. Ultimately this interest led me to the SeedPaths software development boot camp. The program tested my tenacity and intellectual capabilities while honing my professionalism and software development skills. As a graduate of the SeedPaths program I am eager to prove my worth to your company as an entry-level software developer.
